

# United States Refugee Evaluation

Danielle Lamb

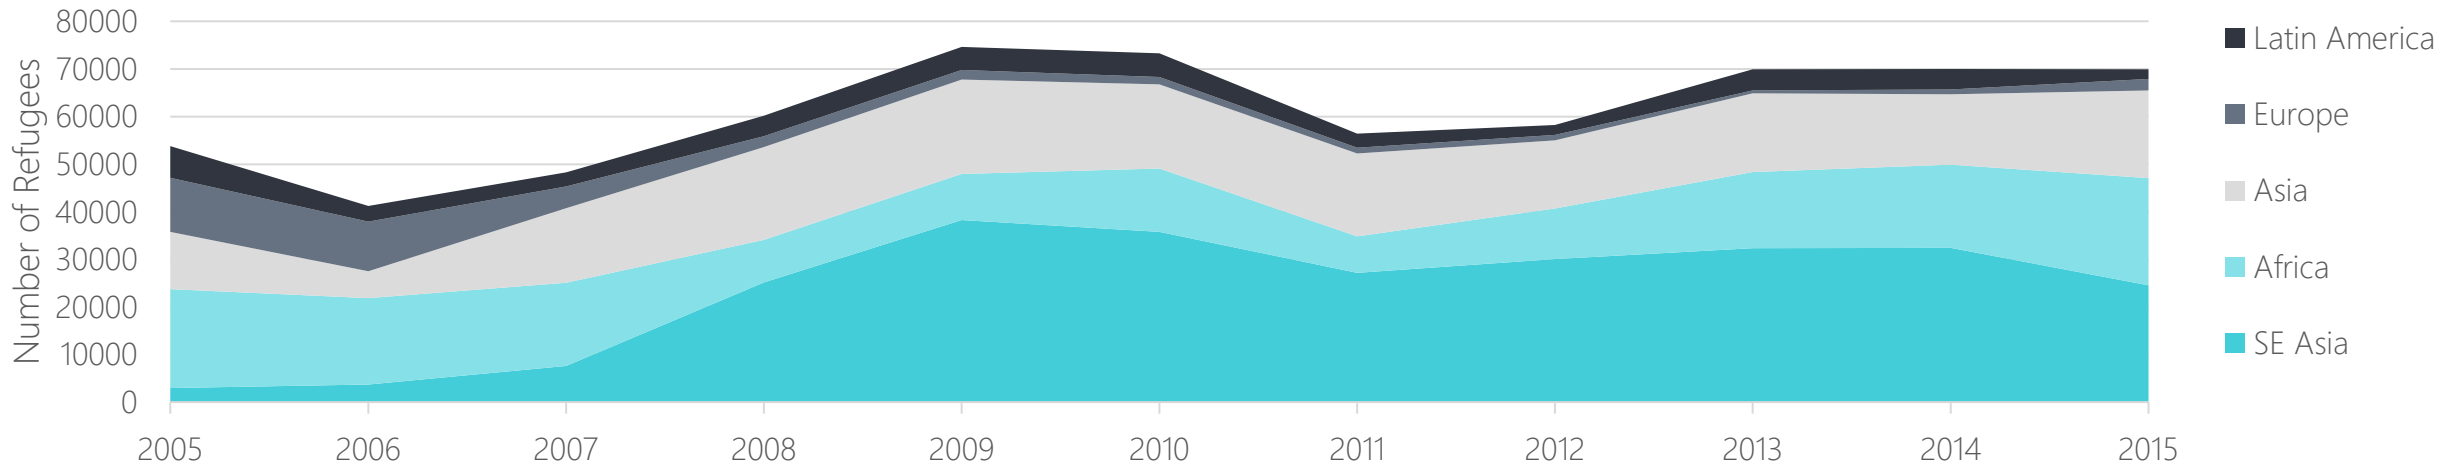

# UNITED STATES REFUGEE STATISTICS

Total Incoming Refugees Per Year

# REFUGEE ORIGINS

Refugees per Year by Region

A majority of refugees come from countries in South East Asia beginning in 2007, are between 25 and 49, and are mostly female.

Reasons for fleeing include political unrest, religious restrictions or violence, and gender/sexual orientation inequality.

Knowing where and the potential reason for refugees to flee a country can help better prepare the United States in assisting these people.

A notable amount of refugees also have come from Africa and Asia, with minor amounts fleeing from Europe or Latin America.

# ANTICIPATING REFUGEES

## PREPARE INTERALLY

As a country, have a secure plan, supplies, and funding to swiftly and safely intake refugees.

## ANTICIPATE ESCALATION

Keep tabs on the escalation of each issue and be able to predict when issues will escalate to cause refugees.

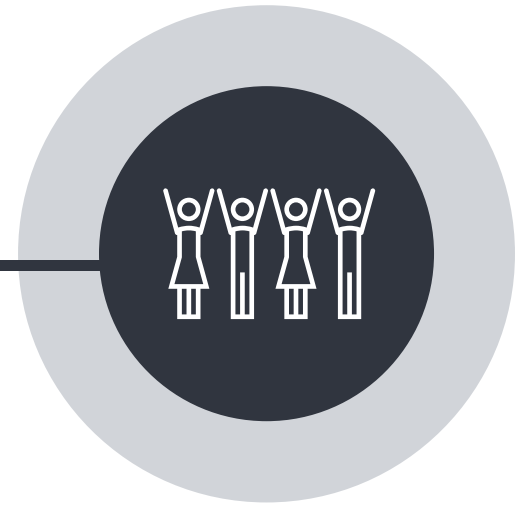

## MONITOR UNREST

Be aware through trusted news sources of any unrest currently happening or anticipate happening.

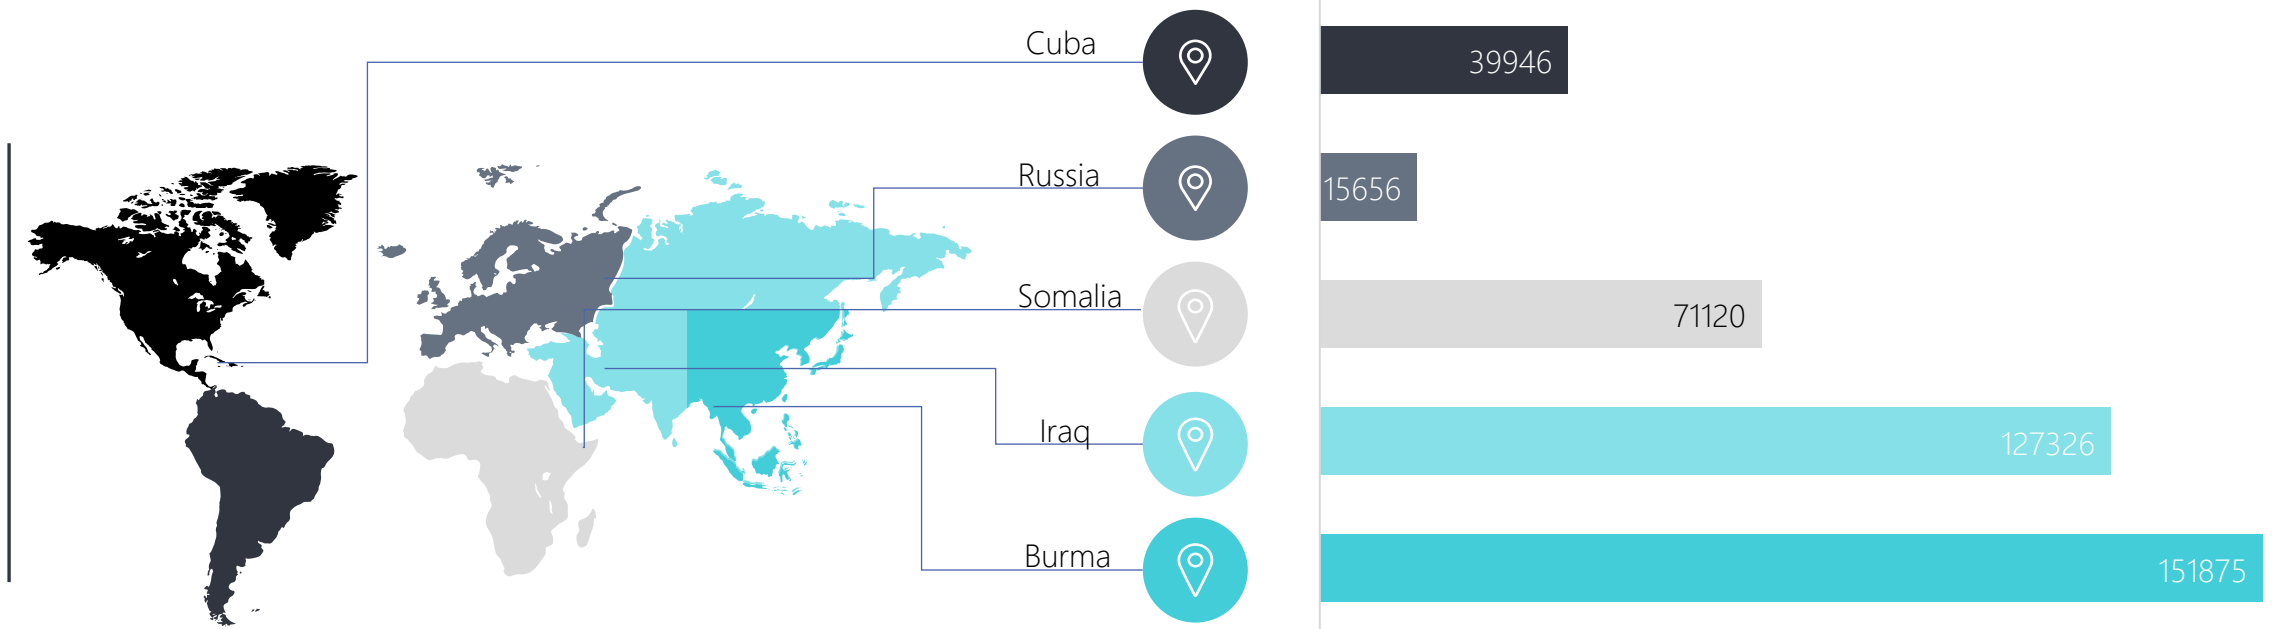

## SECURE PARTNER RELATIONSHIPS

Be active in relationships with partners such as the UN Refugee Agency as well as internal US companies willing to help refugee resettlement.

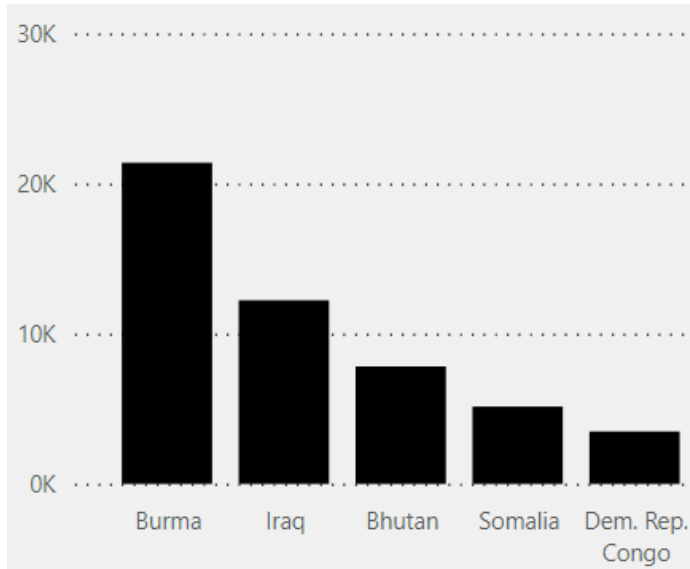

# POLITICAL UNREST IN BURMA

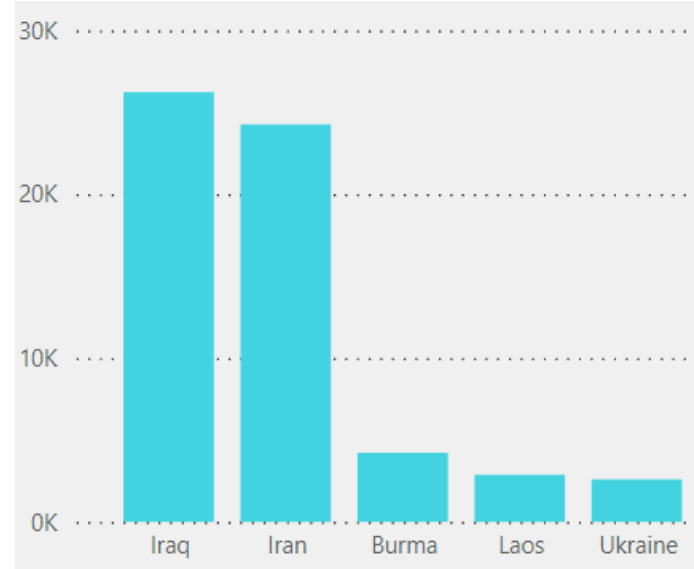

- The highest concentration of refugees across the globe are from Burma, also known as Myanmar.
- Between the years 2005 and 2015, a total of 151,875 people originating from Burma.
- The previous slide indicated a severe increase in refugees from South East Asia beginning in 2007.
- In late 2007, the Saffron Revolution began in Burma, featuring protests as a result of the government removing subsidies on gas.
- Prices of gas increase between 60-100% with public transport fuel increasing 500%.
- In addition, non-violent protests were met with arrests and deaths.

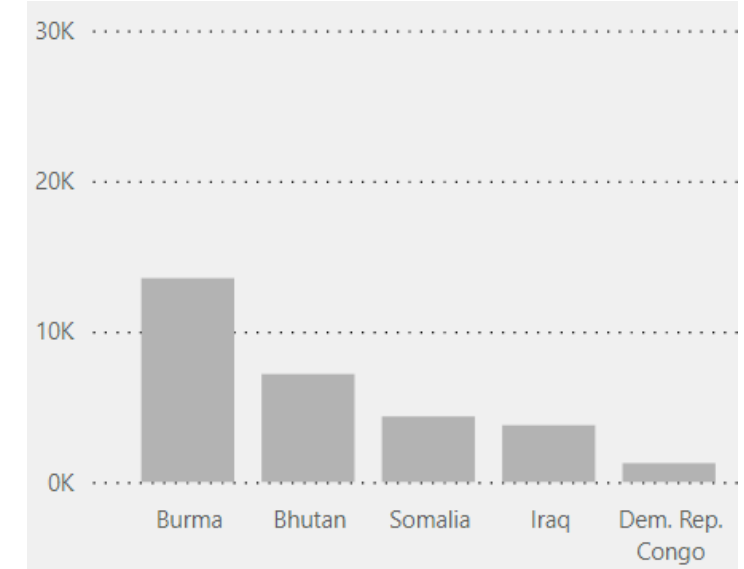

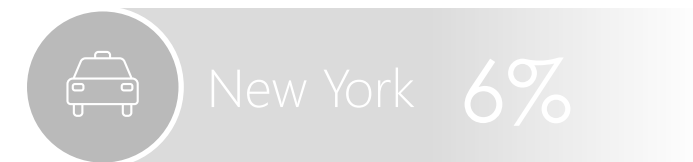

# MOST POPULAR US STATES

Of the total amount of incoming refugees, 10% of those come into the United States through Texas. A majority come from Burma, Iraq, and Bhutan.

California is similar to Texas with 11% of total incoming refugees. However, the overwhelming amount originate from Iraq and Iran with a lower amount from Burma, Laos, and Ukraine.

Unlike California and Texas, New York only represents the destination state of 6% of refugees with similar origin countries of Burma, Bhutan, Somalia, and Iraq.

# POTENTIAL RISKS

## HEALTH RISKS

Incoming refugees have the potential of bringing in sicknesses or diseases from other countries. A health screening process should be in place to evaluate each person seeking refuge.

## LOYALTY RISKS

With the intake of people escaping from an unsafe situation, there is also the potential for those with ulterior motives to plan an attack or spy.
